

Founded in 1999, AddOn Networks is the leading provider of transceivers and high speed cabling. With a reputation for high quality products as well as an extensive custom design portfolio, AddOn has the connectivity solution regardless of the requirement.

At AddOn, 100% of the products we ship every day are tested in the specific application for which they are intended, never batch or spec tested only. We run bandwidth, distance and IOS network tests. We have documented an impressive 0.03% failure rate over the last 10 years. To continue this rate of success, we invest millions annually in our own, on-site testing lab.

TRANSCEIVERS

AddOn transceivers seamlessly scale any network, while offering quality that exceeds the OEM. They expand network reach, increase bandwidth and improve network performance - all without voiding SmartNet or any additional SLA.
