

# Manage XR Devices, Deploy Content, and Give Users a Focused Experience

## Confidently Manage VR & AR Devices at Scale

### Effortlessly Manage Devices with Full Control

Managing devices manually is difficult & legacy MDMs are limiting. With ArborXR you can set up a variety of VR & AR devices, configure settings, keep them up-to-date, and monitor your inventory with full control.

### Reliably Scale XR Deployments

Scaling XR devices remotely is nearly impossible. With ArborXR you can manage unlimited devices with bulk enrollment and mass configuration while keeping everything organized. Securely manage thousands of devices with enterprise-grade security.

## Built from the Ground Up for VR & AR Devices

“We recognize the friction that still exists in deploying large numbers of VR & AR devices. **Working with ArborXR can help us solve this problem.** We’re confident this collaboration with ArborXR will result in tremendous benefits for our customers & partners as we support their efforts to manage large-scale deployments.”

**Said Bakadir**, Senior Director XR Product Management, Qualcomm Technologies, Inc.

## Remotely Deploy and Manage VR & AR Content

### Deploy Content Remotely with Incredible Flexibility

Plugging in cables to install content is painful and legacy MDMs aren't much better. ArborXR lets you deploy apps & files, verify install status, and share content the way you want.

### Always Keep Content Up-to-Date & Monitor Usage

Reliably managing content in the field is difficult. With ArborXR you can update content, manage versions, keep content organized, and monitor content usage.

Walmart

“One of the big reasons we’re working with ArborXR is I know I can get on the phone tomorrow with someone from their team and work through a problem or share a need. That’s rare and incredibly valuable to us.”

Jarrad Nagel, Senior Manager of Digital Learning and Innovation at Walmart

## Control What Users Can See & Do in VR

### Keep Settings Secure & Users Productive

The default environment is full of distraction and lacks control for admins. With ArborXR you can guide users, customize the environment, moderate apps, and lock down the headset as you see fit. Including a multi-app launcher and kiosk mode.

### Monitor & Guide Users with Remote View

See exactly what users are seeing in the headset. Monitor progress in real-time, guide them through VR experiences, and troubleshoot problems quickly.
