

Summary

- **Increased access to network resources.**
- **Staff in the field is able to upload files to the company's internal file servers.**
- **Increase productivity by 100%.**
- **Huge step in the right direction for remote work.**
- **Reduced VPN tickets by 100% for remote file server access.**
- **Able to send files to third parties with ease.**

“Being in the construction industry most of our employees work remote. Triofox allows them to have a near in office experience with the desktop client. This has allowed for quicker and increased access to network resources and increase in productivity at job sites all with just an internet connection.”

–Kris Hardin, IT Director at Pogue Construction

Customer Success Story

Customer

Since 1979, Pogue Construction in McKinney, Texas has become an established contractor in the commercial and institutional construction business. In the past 40 years Pogue has grown to become one of the top general contractors in North Texas. From churches and schools to medical centers and municipal buildings, their architectural stamp is all over the region.

Challenge

With more than 200 employees at different job sites, in the office, and remote, Pogue Construction was experiencing difficulty accessing files through the internet, accessing

more than one folder at once, and sharing documents. While at job sites, Pogue's employees needed a secure and easier way to access corporate file servers' data and also needed the ability to upload pictures, videos, and files from those sites to company internal file servers using their laptops, iPhones, iPads, or Android devices. Dedicated connections for network access were not user-friendly for employees. Pure cloud solutions were limiting. They only allowed staff to access one network folder at a time and made it difficult for them to share documents or folders with third parties. Pure cloud solutions also required separate logins that would not tie into Pogue's Active Directory. Pogue Construction needed a program that

Customer Success Story

would allow their employees, both remote and on job sites, to get a near in-office experience where they are able to access multiple folders and share documents with ease, areas that were not achieved through Remote Desktop, VPN, or FileCloud.

Solution

Through setting up a remote file server access, Triofox was able to eliminate VPN and FileCloud headaches for users on job sites, in the office, and remote. Triofox worked directly on top of Pogue's existing file servers, with a straightforward and speedy setup process. The server acts as an additional layer on top of current data. This remote file server allowed for a near in-office experience for users

with direct access to the file server, quicker and increased access to network resources, and the ability to easily share files externally, all through one secure login. Files and documents for projects are easier to review, change, update, and distribute among users both internally and externally, resulting in increased efficiency for each project. The server allowed for a secure and easier way to access corporate file servers' data and gave staff on job sites the ability to upload pictures, videos, and files from those sites to company internal file servers using their laptops, iPhones, iPads, or Android devices. This remote file server access has increased productivity at job sites, increased employee mobility, and has made it easier for all members of a project to stay up-to-date on documentation.

Employee Comments

"So glad I don't have to use Remote Desktop again to get to my files, to copy them to my computer, make and save changes, and then copy it all back to Remote Desktop. This is a huge improvement!"

"This makes working from home or from a job site so much easier."

"The file sharing has made getting documents to others so much easier! This is better than FileCloud."

"Wish we would have had this sooner before COVID last year but I'm so glad we have this now. This is so much better than Remote Desktop."

ABOUT GLADINET

Triofox is an enterprise solution of Gladinet, Inc. Triofox delivers a proven, secure, and easy-to-use solution for remote access to file servers. Gladinet provides a fully integrated suite of cloud-based remote access solutions that enhance existing Windows file servers with secure remote access, mobile file sharing, data protection, and cloud migration while ensuring security, privacy, compliance, and control. Headquartered in Boca Raton, FL, Gladinet's flagship product, Triofox provides the #1 turnkey remote access solution for the work-from-anywhere model. A secure, flexible, and fast implementation, Triofox is the ideal solution for local, national, or worldwide organizations. For more information, visit www.triofox.com or call 888 955 6656.
