

Wired and Wireless should not be kept apart. The Cisco Catalyst 9000 and 9000X families combine them.

How to Buy

Separate operating system. Separate management. Separate security. But that's changing.

4 Here are 4 ways this will help you.

- One less OS +
- Your costs go down -

Cut your operating costs by eliminating the IT burden of managing and securing two operating systems.

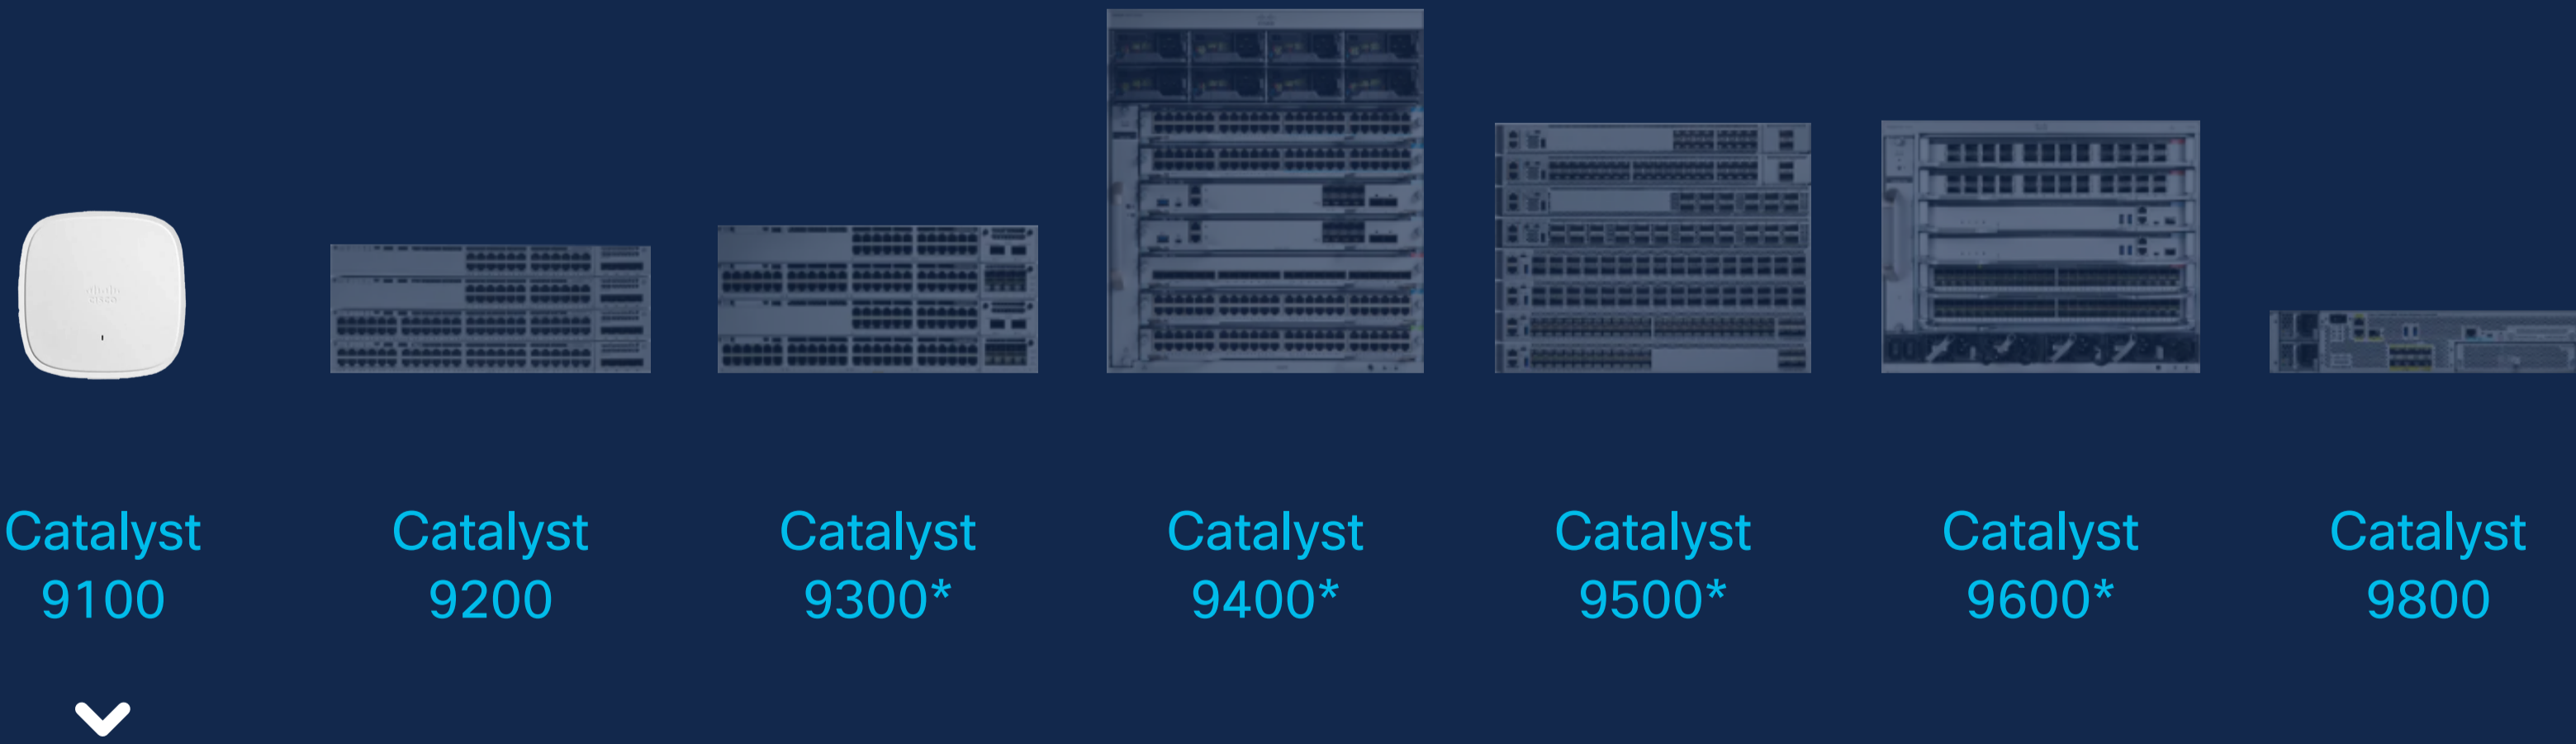

For every \$1 that companies spend on network equipment, they spend \$3 on network operations and management.

[Source](#)

With [Cisco IOS XE](#), your IT team can deploy services faster, give users one seamless experience, and certify one release—instead of two.
- Your network is more secure +
- You're ready to change, scale, and grow +

The Cisco Catalyst 9000 family

The new Catalyst 9000X models offers versatile design for more flexible operations.

Cisco Catalyst 9100 Access Points

The Catalyst 9100 Access Points provide Wi-Fi 6/6E support and superior RF innovations, and are ready for the evolution of user expectations, the heightening of sustainability efforts, the increase in IoT device attachments, and next-generation cloud-driven applications.
