Leaders in Converged IAM

## CONVERGED IAM

### The Present and Future of Identity and Access Management

If you are looking for three separate products; for Access Management (AM), Identity Governance, and for Identity Administration (together called IGA), we have breaking news for you.

Disparate products to fulfil a complete IAM environment are a thing of the past. Today, you need to leverage the power of an all-in-one Identity and Access Management suite to bolster productivity, improve security, and enhance user experience.

Converged IAM is a term coined by Gartner in their 2020 IGA Market Guide. It essentially means a product that has both AM and IGA in one product. Both modules must be built upon a common codebase and presented in a unified dashboard. Gartner says that over 70% of new IAM implementations by 2025 will be Converged.

### The benefits of Converged IAM are numerous

1

One product from one vendor involves a significantly lower TCO and less complexity & complications than stitching together different solutions.

2

Updates and repairs in one IAM product don't affect the integrated IAM products as the Converged IAM vendor is responsible for uptime.

3

Converged IAM is more suitable to be the latest need for the \*Identity Fabric, a phrase coined by the analysts, that is gaining rapid traction in the world of Infrastructure security.

4

Single Vendor Advantage: deal with just one organization to buy, maintain, and update your IAM installation.

5

Most businesses typically have basic to moderate IAM requirements. Full-suite products offer poor ROI as many features are never used. A Converged solution has just the right elements to avoid confusion and offer better ROI.

6

Availability of new set of powerful features. This is possible when AM and IGA are built on a common codebase and presented in a unified dashboard: For example - a Converged IAM product can step-up or step-down authentication (AM) based on the time elapsed for an access since the last Access Certification campaign (IGA).

Gartner says that Compact Identity has the deepest IGA of any Converged IAM product available. The product was also featured in Gartner's Access Management Magic Quadrant 2021.

Compact Identity was also recognized in KuppingerCole's Leadership Compass 2021 and Frost & Sullivan's FROST RADAR 2021. It also won 7 awards in the last 10 months alone, including "Most Innovative in Converged IAM" at the 9th Annual Global Infosec Awards by Cyber Defence Magazine (CDM) at the RSA Conference 2021.

The product is also available in the world's first pay-per-use model where you pay only for the services availed like Single Sign-on, Multifactor Authentication, Password Reset, User Onboarded, Access Request or Certified.

\* "Identity Fabrics" stands for a paradigm of a comprehensive set of Identity Services, delivering the capabilities required for providing seamless and controlled access for everyone to every service. They support various types of identities such as employees, partners, consumers, or things. They deliver the full range of identity services required by an organization.
