

Texas Cyber Command

Protecting Texas Critical Infrastructure

Elevate the protection of Texas Critical Infrastructure by strengthening cybersecurity collaboration across Texas public sector governments and private sector enterprises to respond to threats faster through the TXCC Cyber Threat Intelligence Center (CTIC) Hub. Cyware's Spoke Intelligence Actioning Platform is designed specifically to connect covered stakeholders with the TXCC CTIC Hub and make it easier to take actions against threats much faster.

The Mission: A Unified Defense Across the State of Texas

Across Texas, organizations are strengthening cyber resilience and coordination against an increasingly sophisticated threat landscape. While the TXCC provides a strong central defensive vision, many local teams continue working to streamline operations, reduce tool sprawl, automate manual processes, and address cybersecurity staffing gaps.

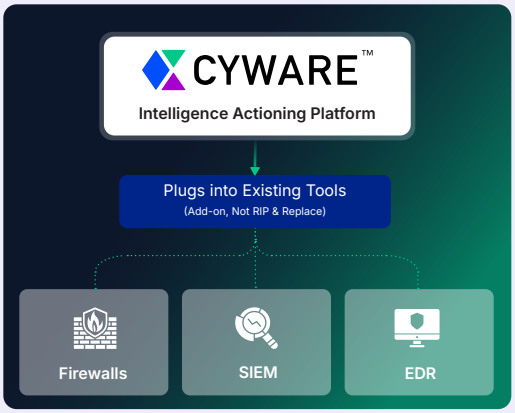

True resilience requires more than just local defense. It requires a synchronized front where a threat detected in one county informs the defense of the next. **Cyware provides the technical fabric to make this connectivity a reality.**

The Strategy: Bridging the State-to-Local Gap with Cyware

Cyware offers a dedicated initiative built for Texas public sector organizations. Going beyond traditional information sharing, Cyware creates a direct, machine-to-machine connection between local security environments and the TXCC CTIC to enable faster intelligence sharing, coordinated response, and stronger statewide operational alignment.

TXCC Intelligence Sharing and Actioning Architecture

CYWARE™

Technical Framework: From Threat Intelligence to Action

Cyware is designed to replace manual data entry with an automated intelligence platform for threat actioning .

- **Unified Intel Exchange:** Automatically ingest and normalize threat data from TXCC, sector-specific ISACs (like MS-ISAC or K12SIX), and your internal tools.
- **Intel Operations:** With over 400 native connectors and AI generated playbook automation, your team can automate repetitive tasks and execute response playbooks across your existing tools. In Q1 2027, intelligence operations playbooks may be shared across all covered stakeholders in Texas using the Cyware platform.
- **Pragmatic AI Support:** Use AI-assisted tools to summarize threat bulletins and extract actionable indicators, allowing your analysts to focus on decision-making rather than data formatting.

Cyware Procurement: Simplified via Texas DIR

We have aligned our procurement process with the standard Texas purchasing framework to ensure rapid deployment.

- **DIR Contract Access:** Cyware is available through the Texas State DIR Contract via our partner, Carahsoft.
- **State-Specific Pricing:** Texas entities have access to pre-negotiated, special pricing. This ensures the lowest possible cost and removes the need for lengthy individual negotiations.
- **Scalable Packages:** Whether you are a large state agency or a mid-sized school district, our tiered packages allow you to start with core intelligence sharing and scale to advanced orchestration as your maturity grows.

Why Cyware:

Automated Connectivity
Native, bi-directional integration with the TXCC CTIC enabling real-time intelligence sharing for faster coordination and response.

Aligned Statewide Capabilities
Feature parity with the TXCC CTIC hub keeps local organizations aligned with the State's latest cybersecurity capabilities.

Workforce Readiness
RSOC-trained analysts familiar with Cyware workflows help reduce onboarding time and strengthen cyber operations.

U.S. Based Support
Cyware is U.S. headquartered, with all support delivered by U.S. citizens from within the United States.

Dedicated Sovereign Infrastructure
A dedicated Texas multi-tenant Intel Operations environment helps ensure secure, sovereign handling of Texas public sector data across all TXCC Covered Stakeholders.

Strengthen cyber readiness and accelerate coordinated response across Texas with Cyware.
