

Advance Your Cybersecurity Maturity

Constant cyberthreats from attackers targeting every IT weakness require secure, scalable solutions to help protect your mission and data.

More than 32,000 cyber incidents hit federal agencies in 2023 – up nearly 10% year over year.¹

Build on current investments with integrated solutions that advance security and resilience across three critical areas:

Reduce the attack surface.

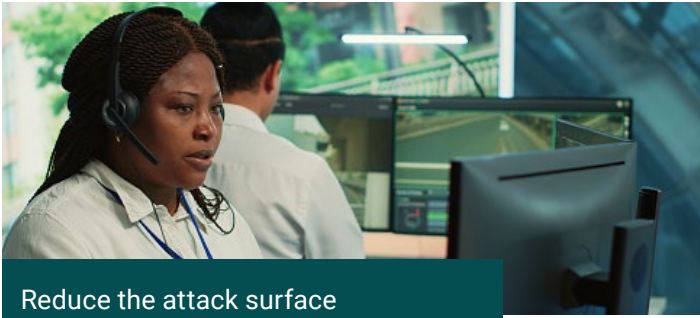

Detect and respond.

Recover quickly.

Advance Your Cybersecurity Maturity

Reduce the attack surface

Sixty-seven percent of organizations worry that innovations increase attack surfaces.² Our approach addresses this directly with **secure-by-design hardware and software** and security-focused tools with MFA, RBAC and encryption. We support supply chain integrity from manufacturing to deployment.

Why this matters: FISMA, NIST 800-53 and FedRAMP compliance requires demonstrable attack surface reduction. Many Dell solutions meet these requirements out of the box.

Detect and respond

Eighty percent of organizations acknowledge room to improve threat detection.² Dell **security solutions offer real-time monitoring** across all endpoints, AI-powered anomaly detection at the BIOS level and threat intelligence integration for faster response.

Why this matters: When attacks happen, CISA reporting requirements demand immediate identification and remediation.

Recover quickly

Sixty-four percent of organizations struggle to recover from a cyberattack and meet their service-level agreements (SLAs).² We can help you **recover quickly with automated data integrity validation**, one-click system restoration back to the last secure state, and clean room rebuilds for compromised environments.

Why this matters: Continuity of operations depends on recovery speed. You can speed time to recovery with Dell solutions and keep critical citizen services online.

Dell cybersecurity solutions help agencies:

Implement Zero Trust architecture (meeting OMB M-22-09 and DoD requirements).

Deploy AI-powered threat detection (aligning with the NIST AI Risk Management Framework).

Train staff to make security everyone's responsibility.

Protect your agency, advance your mission with Dell Technologies

Lock down data and stay mission ready with secure, modern tools built for today's threats.
