

DELLTechnologies

Boost Federal Productivity With AI PCs

Elevate productivity and security with cutting-edge solutions from Dell Technologies – fast, efficient and built to meet federal standards.

By 2026, more than 80% of independent software vendors will have embedded generative AI capabilities in their enterprise applications, up from less than 1% in 2023.¹

Enhance productivity through automation.

Drive security and compliance.

Create a future-ready environment.

Meet federal mandates.

Boost Federal Productivity With AI PCs

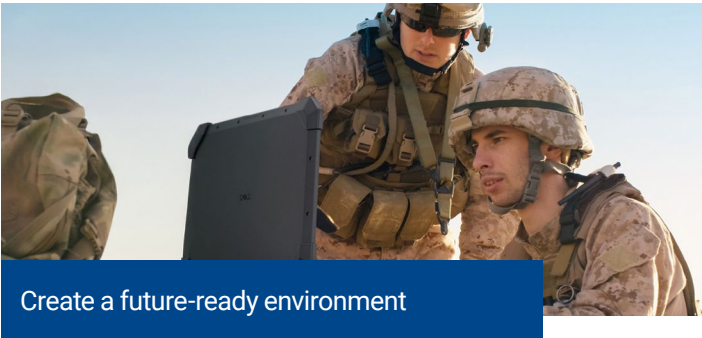

Outdated devices can hinder a federal agency's ability to meet its mission efficiently. Dell AI PCs accelerate productivity by automating routine tasks, helping civil servants work smarter and faster.

Why this matters: With limited budgets and tight deadlines, automation helps federal teams save time and focus on higher-value, mission-critical tasks.

Strengthen your security posture with AI that detects and responds to threats right on the device. Comply with federal frameworks including FISMA, FedRAMP and NIST 800-53.

Why this matters: Agencies with robust Zero Trust implementations can significantly reduce the risk of a security breach. Reduce downtime with self-healing systems. Easily comply with the latest mandates.

Whether your agency is ready for AI today or preparing for it tomorrow, AI is already becoming standard. Independent software vendors (ISVs) are integrating AI directly into modern processors, making capabilities like predictive analytics, automation and intelligent performance optimization not just available – but essential.

Why this matters: Federal agencies must begin preparing their IT environments, policies and workforce to harness these capabilities securely and effectively, ensuring mission readiness in an AI-driven future.

AI PCs from Dell Technologies deliver immediate productivity gains while aligning with federal AI policy including Executive Order 14179 and OMB AI guidance.

Why this matters: Support both mission success and regulatory readiness with productive equipment that also meets today's federal mandates.

Accelerate federal innovation and drive efficiency
