M COREMOTE

NSC3™

M COREMOTE NSC3™ is a real-time situational awareness and secure communications software platform tailored for critical operations.

M COREMOTE NSC3™

KEY FEATURES

Crowdification

With the NSC3 LiveLink™ external users can be invited to broadcast videos to your organization or share videos with an external user, without downloading any apps.

AI Video Analytics

NSC3 Valor AI analyzes data in real-time from selected video sources and detects important events from the video feeds enaabling more rapid response to changing conditions.

Agency Collaboration

Joint Oprerations and multitenancy enable seamless collaboration across units and teaams, empowering efficient, coordinated joint operations.

The platform improves the efficiency and security of critical operations by streaming and storing live video from drones, dash cams, smart devices, body cams, IP cameras.

All data broadcast between platform and server is fully encrypted and secured with AES-256, TLS 1.3.

The NSC3™ features the industry's fastest patented video engine, completed by secure push-to-talk and messaging. The solution operates reliably across any available network, using intelligent throttling to automatically adjust frame rates and resolution as network conditions change.

M COREMOTE NSC3™

FEATURE OVERVIEW

Standard

- Patented and fastest video engine in the industry
- Secure Push-to-talk audio with conferencing call option
- Messagaing with secure protocol
- Live tracking, annotation, geotagging and customisaable maps
- Highly efficient and secure Task-Based collaboration
- Ultra-secured data, fully encrypted with AES-256, TLS 1.3
- Network and Device agnostic
- Intelligent throttling to bandwidth changes

Extensions

Valor AI: Analyzes video data in real-time and detect objects and subjects of interest

LiveLink™: Users can be invited to broadcast videos without downloading any apps

Joint Operations: Enables collaboration across various units and teams
