

Next-Gen Device Management for Point of Sale Devices

Leaders across the globe drive operational excellence at scale with Esper

Managing point of sale solutions is complex because of the vast array of options available. Are you using standalone units? Or how about iPad-based systems? Are you mobile-first and rely on mPOS? Or maybe you have a combination of all these. With Esper, you can mix and match, and then manage them from anywhere.

See how customers successfully deploy, manage, and update their mission-critical point of sale devices.

Taco Bell flips devices from Windows to Android overnight, reduces provisioning steps, and increases device control

- With Esper, Taco Bell migrated EoL Windows POS hardware to Android via OTA overnight while locations are closed, saving millions on CapEx
- Reduced provisioning time for new devices by 380%, reducing 3PL staging and kitting costs
- “Working with Esper allows us to move fast, save money, and now we can make strategic decisions about what hardware to use”

One of the largest global full service restaurants manages more devices at more locations with fewer IT resources

- Global restaurant company came to Esper to help unify their device management across their brands and locations on a single platform
- With the ability to remotely monitor and update devices from a single pane of glass, each IT manager is able to monitor more devices increasing efficiency and lowering OpEx

Snackpass continuously innovates their social ordering platform with Esper

- Snackpass manages and rolls out complex software updates to a diverse fleet across thousands of restaurant brands
- “Esper allows us to effectively manage our devices both individually and as a cohesive unit. When deciding on hardware for our fleet, our first priority is ensuring it’s compatible with the Esper platform.”

SumUp consolidates how they manage a diverse POS device fleet with Esper

- SumUp chose Esper to lock down their various POS tablets running AOSP
- SumUp previously used TeamViewer + proprietary MDMs, but wanted to consolidate on one platform that just works
- Benefits include: accelerated staging & kitting, proactive management, remote troubleshooting, and robust lock down capabilities

Esper makes the POS device experience easy for Arryved’s brewery customers

- Arryved uses Esper Seamless Provisioning, which enables them to dropship new devices directly to customers—the device auto-provisions on first boot without any complicated steps
- Aligned values result in innovative solutions: flexible, reliable, elevated device experiences

Make your point of sale experience exceptional

Esper revolutionizes device management by redefining what it should be: a driver of business growth. We believe device management should do more than meet business demands — it should accelerate your operations and deliver tangible, lasting impact. That’s why we’re leading the market into the modern era, where automation replaces outdated workflows, re-provisioning becomes obsolete, and managing by exception transforms efficiency. Your devices should deliver exceptional experiences. We make that a reality.
