Enabling teamwork anywhere with Surface and Microsoft 365

Collaborate freely and boost productivity

Teamwork comes to life for everyone regardless of who's onsite and who's remote with Microsoft Teams running on Surface. Everyone can be seen and heard with high-definition video clarity paired with Studio mics for crisp sound quality.

Accomplish more with devices that support the different ways people need to work. The Surface interface improves productivity—from faster secure log-ins with Windows Hello to more natural, efficient ways of working with the touchscreen and inking.

Save time and increase productivity. Employees can save two hours per day due to improved collaboration & productivity when Surface is paired with Microsoft 365 Enterprise collaboration and cloud storage technologies.

With high-performance chip sets, long battery life, multi-touch screens and crystal-clear audio and video Surface supports the different ways people need to work.

Powered by Windows 10 Pro OS—Surface users gain an optimal in-app experience that enables them to be more productive and collaborative from anywhere at any time.

Great video is at the heart of making remote work solutions feel closer to what you'd experience in the office. Surface camera innovation optimizes signal noise ratio processing and reflect skin tones accurately.

Deploy and manage with less complexity

Do more with less. Implement new, agile methods of device deployment and management that improve IT efficiency, reduce overhead and support costs.

Reduce IT complexity, and eliminate time-consuming corporate re-imaging by shipping and deploying straight to users with Autopilot zero-touch deployment and unified management.

Streamline deployments. Surface can save IT 2.5 hours per application provisioning request and over 25 minutes configuring each device because of the synergies across Surface, Windows 10, and EMS.

With Surface pre-configured with Windows 10 Professional, you can implement new, agile methods of device deployment and management to reduce costs, time and effort for IT.—from zero touch deployment to remotely managed devices from the cloud

Enabled for Autopilot. Every Surface device is shipped straight from the factory enabled for Autopilot. Via Intune and Surface, deploying Office is as simple a pushing a license key enabling Office fully within minutes of the first boot.

Microsoft Endpoint Configuration Manager allows you to synchronize and deploy Surface firmware and driver updates within the Configuration Manager client. Integration with Microsoft Intune lets you see all your managed, co-managed, and partner-managed devices in one place.

Advanced security from chip to cloud

Security is built into every layer on Surface devices, from the firmware adopted from a Microsoft open-source UEFI to the operating system.

Maintain secure control from anywhere. Manage devices right down to the firmware level through the cloud. Surface is the only manufacturer to have Device Firmware Configuration Interface (DFCI).

Defense in depth. Increase security while also reducing costs—Surface powered by Microsoft 365 improves enterprise security, reduces both the number of security breaches and remediation costs.

Microsoft Endpoint Manager. Lock and manage devices at the boot level with firmware controls, including the camera, USB, and Bluetooth®.

Microsoft Defender Advanced Threat Protection. Advanced Threat Protection (ATP) uses cloud-based telemetry to protect against known global threats.

Microsoft 365 Conditional Access. Grant access to data and resources only when a device meets specific criteria like user location, time of day, or other factors you choose.

Ensure your teams are at their best with Surface and Microsoft 365

Support the different ways and places your team works

Deliver more flexible options without sacrificing productivity.

With flexible form factors, Windows Hello login, touchscreens, inking and great audio, modern devices won't hinder your employees from being seen and heard while keeping in their flow.

Streamline device management and deployment

Reduce IT complexity

Eliminate time-consuming corporate re-imaging by shipping and deploying straight to users with Autopilot zero-touch deployment and unified management.

Maintain secure control from anywhere

Increase security while also reducing costs

Remain confident your data won't be exposed even when a device is lost or stolen. Protect against known global threats in real time and launch security updates at scale with Microsoft Defender Advanced Threat Protection (ATP)
