HPE OneView is an integrated IT management solution that transforms compute, storage, and networking into software-defined infrastructure.

Software-defined infrastructure enables IT to

- Easily provision and manage physical infrastructure using software-defined templates and APIs to define and automate infrastructure configuration and lifecycle operations.
- Manage infrastructure as pools of resources to streamline administrative and operational tasks.
- Improve staff productivity and increase the pace of introducing new technologies and applications.
- Lower costs associated with downtime and regulatory risks.

» Transform with software-defined automation

Software-defined automation in HPE OneView enables IT administrators to deploy infrastructure faster, simplify lifecycle operations, and increase productivity.

» Compose for any workload

The physical infrastructure of the data center is defined using software, which makes it programmable and able to be managed as code through one unified API.

» Connect from core to cloud

Provision turnkey private cloud infrastructure and leverage the partner ecosystem to integrate HPE OneView within your existing management frameworks and preferred platforms.
