cisco

5 reasons to upgrade your agency's network with Cisco DNA Spaces

1. Maintain trusted facilities and workspaces.

Create trusted spaces for use by workers and citizens when providing services such as permitting/licenses, public health, courts, justice, and recreation. Or during public events like community meetings, sports, and festivals. Set up real-time data and density threshold monitoring to track the number of staff and visitors. Monitor compliance for physical distancing requirements. Gain insights into user behaviors, including frequency and duration of visits, to better understand how your spaces are being used.

2. Seamlessly onboard visitors to your facility.

Deliver contactless experiences via captive portal apps that classify and tag visitors based on their behavior. Enable zero-click contextual engagements, including emergency communications, across SMS, email, and other channels. Integrate Cisco **OpenRoaming** to keep your guests connected via uninterrupted, secure Wi-Fi onboarding.

Location-based services are playing a crucial role in helping to manage the safe return of employees and citizens to government buildings and campuses. With Cisco DNA Spaces you get right-now metrics, including real-time views of visitor behaviors, to help protect the safety and well-being of your facility's users.
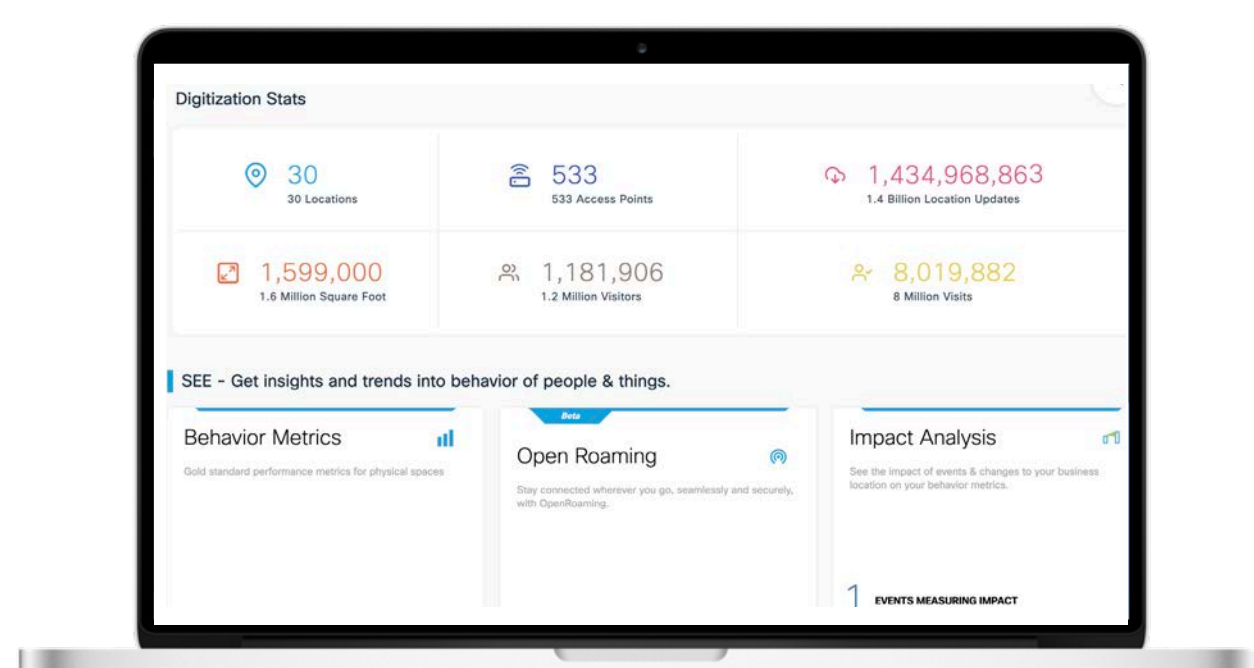

## 3. Optimize your facility operations.

Monitor and track assets to optimize space usage and operational efficiencies for employee spaces as well as those used by citizens. Enable location analytics, plus behavior metrics for trend analysis and benchmarking, to make data-driven decisions for improved outcomes and to better plan future facilities.

4. Access rich location-based services from a single dashboard.

Centralize control and visibility into location services for your agency via a single dashboard with 24/7 monitoring and end-to-end service-level agreements (SLAs) to help ensure performance.

Cisco DNA Spaces can help you safely engage citizens and maintain continuity of critical on-site services. It lets you track attendance and in-person participation at events, deliver automated alerts and notifications, and empower customized citizen experiences.

5. Expand platform capabilities.

Integrate location-based data with partner applications and APIs to embed greater resilience, improve operational outcomes, and deliver new or enhanced services to staff and visitors. Enjoy compatibility with all Cisco wireless solutions, including **Wi-Fi 6**.
