3840 x 2160

**BETTER  
THAN EVER**

Smooth edges for both content and programs allows for a more comfortable and satisfying user experience. Text size and user interface do not have to shrink, but can be shown in a clarity unavailable with low resolutions.

1920 x 1080

**SAME AS ALWAYS**

Functional & readable, however text and images can lack clarity with jagged edges - making viewing difficult due to the low pixel density.

**SHARPER TEXT**

NOT SMALLER TEXT

With DPI Aware software (such as Windows 10) text is shown crisp and clear, rather than just smaller. This improves readability and ease-of-use for the end-user.

**Photography**

**Increased Detail**

Today's high-resolution photography calls for high resolution workflows, including a large, high resolution display to show all that crisp detail.

**FULL HD**

On a 27-inch screen

When viewed at 100% shows 11 columns.

**4K**

On a 27-inch screen

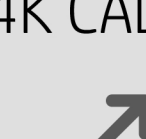

When viewed at 100% shows over 22 columns, with incredible clarity. That's over 4x the resolution of a FHD display. Or view the same 11 columns with remarkably smooth rendering of fonts. Either way the days of too small are gone, 4K is now a comfortable display size.

**4K CAD**

**CRISP LINES**

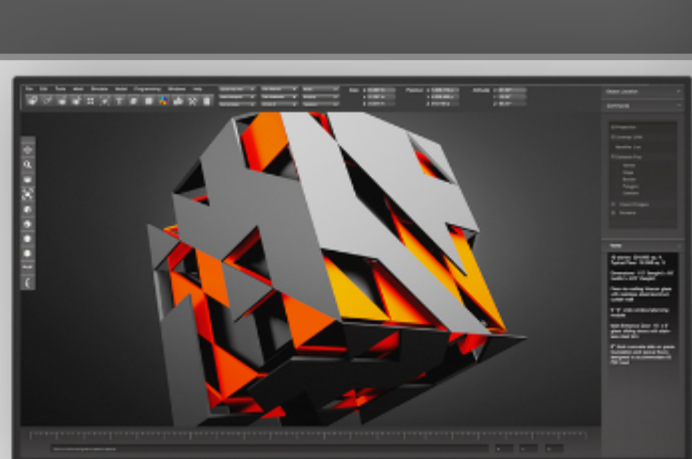

Because of the higher pixel density, all lines in CAD files show up more true to reality - without adding extra jagged edges due to pixelation on lower resolution displays.
