Reliable communication is essential for a safe and effective learning environment. Without it, school routines can become chaotic, disrupting students' education. We provide comprehensive K-12 communication systems that streamline daily operations and enhance emergency response.

Our solutions seamlessly integrate with existing infrastructure, serving as the central system that connects various technologies and can function as a complete standalone solution. By enabling clear communication across schools, administrators can maintain order while ensuring that critical information reaches the right people, whether for routine updates or emergency alerts. This keeps students and staff safe, informed, and on schedule.

Emergency notification and day-to-day communication

Emergency action plan automation

One click simplicity

Notify on-premise and personal devices in real-time

Assists with Alyssa's Law compliance

Bell-schedules

System health

VALCOM
