Finally an affordable solution to bridge the gap from analog paging to simple IP paging.

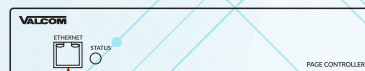

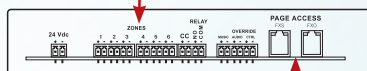

The ezIP products are compatible with a facility's older paging system. When customers are ready to transition to more advanced features and capabilities as their organization grows, they can confidently add ezIP products to their existing network at their own pace.

Most organizations today still employ an analog phone paging system; however, when an organization begins to upgrade their phone to a VoIP system, their old analog system is no longer compatible. The ezIP solution is phone agnostic; it can work with analog or VoIP phones, so when a customer upgrades, the ezIP system still works, helping customers bridge the gap between analog to IP with confidence.

Valcom's ezIP is the simple and affordable solution for basic IP paging. Designed for ease of installation and maintenance, ezIP minimizes the need for extensive training or specialized technical knowledge.

- 1 Simply plug in your Analog phone system**
- 2 Connect your analog zones**
- 3 Easily expand with ezIP Speakers and Horns**

Network

ezIP is compatible with Valcom VIP devices when upgraded

ezIP Page Controller gives you:

The ezIP Page Controller is a three or six zone hybrid analog one-way page controller, combining analog paging zones with IP capabilities to bridge the analog and IP worlds.

Audio Message Schedule Messages on a reoccurring schedule Library Example: "Thanks for your patronage, we're closing in 5 minutes."

Background Music Input Play background music in lobby areas, customer zones, keep employees engaged.

Feedback Elimination Get rid of the annoying squeal when hanging up the telephone.

Easy Phone System Access to ezIP paging endpoints [speakers and horns].

Each page controller can accommodate 45-ohm or 25-volt speakers (one-way or talkback) or self-amplified speakers (one-way only).

Basic One-way Paging System to get you started with basic paging (with exception of doorplate intercom).

If you have old analog Support for Loop Start Trunk, FXO, FXS.

For more modern systems Includes SIP connectivity.

Easily Upgradeable

The EZ-PC3 Page Controller has three one-way zones enabled, with three more zones available by license purchase.

The EZ-PC6 Page Controller has six one-way zones enabled, without additional purchase.

Both the 3-zone and 6-zone models can be upgraded with EZ-SUEZTVIP to Talkback capability with VIP license purchase.
