

University makes remote medical education a reality with Microsoft Surface Hub 2S and Microsoft 365

Background

When the COVID-19 outbreak sparked lockdowns across the globe, the Biomedical University of Rome faced the complex task of reimagining advanced medical education overnight.

Goal

The university's pivot to remote learning created an immediate need for a smart, easy, and effective tool to enhance distance education. Implementation speed and ease of use were paramount.

Solution

"We had to move all of our education services to a digital environment in just a few days and adopt a platform that would allow us to offer them remotely," says Marco Venditti, Head of IT Operations at the Biomedical University of Rome. "We turned to simple, high-quality Microsoft tools that were already in our ecosystem."

Microsoft Surface Hub 2S

This meeting platform and touchscreen whiteboard includes high-quality audio and video.

Microsoft 365

This bundle of productivity apps includes Microsoft Teams, OneDrive, PowerPoint, SharePoint, and more.

Results

The university quickly transitioned to remote learning, ensuring the continuity of advanced, specialized coursework without interruption. Surface Hub 2S delivers all the capabilities the Biomedical University of Rome needs for remote learning: a meeting platform and a collaborative device that accelerates learning using all the senses.

"We turned to simple, high-quality Microsoft tools that were already in our ecosystem."
