

Mobility Best Practices Review

Improve Productivity, Safety & Efficiency for your Organization

Panasonic has spent 25 years helping customers manage their mobile technology deployments. Our engineers and installation experts are trained to uncover issues which might be (1) slowing your team down or (2) detrimental to your operations and worker safety.

Panasonic's knowledgeable and experienced team provides mobility best practice reviews to assess how your technology is being used, then offers suggestions to increase safety, ergonomics and productivity. Issues uncovered typically involve awkward computer placement, driver distraction, degraded power wiring, and faulty grounding.

The deliverable of this process is a formal writeup focused on the following:

- 1) Safety:** Check visibility, accident preparedness and driver/operator distraction.
- 2) Ergonomics:** Check the existing setup for comfort, making sure there are no repetitive or awkward motions.
- 3) Productivity:** Check the current solution for maximum productivity.
- 4) Functionality:** Ensure your technology is delivering optimal performance.
- 5) Value Engineering:** Determine what can be reused and/or customized to reduce cost and TCO.
