

NSC3™ Joint operations

Do you have several organizations and departments working together to solve a large accident, a forest fire, or a riot? Want to share live video feed from any bodycam, dashcam, or drone to all participants?

NSC3 Joint operations enable an organization to share any live video feed they have securely with other organizations. For example, a drone operated by police can be shared with fire departments or border guards.

Create a joint operations task in NSC3 and assign units and videos from any participating organization. All assigned material is in common use during the mission, including map-based view and audio channel. Every organization keeps ownership of its own video material.

Do you have some sensitive video you do not want to share? No problem, do not assign those videos in a joint task.

Joint operation in NSC3™
