

Operational Excellence for Microsoft 365

Improving IT efficiency, maximizing SaaS ROI,
and mitigating risk for enterprise IT teams

What makes CoreSuite different?

We Offer Unparalleled Microsoft 365 Visibility

See all your Microsoft 365 services for your entire tenant through a single console.

We Manage Microsoft 365 Like No Other

Manage Microsoft 365 with permissions and views aligned to your business.

We Help You Automate Tasks

Workflow automation dramatically boosts IT efficiency, reduces mistakes.

Gold
Microsoft Partner

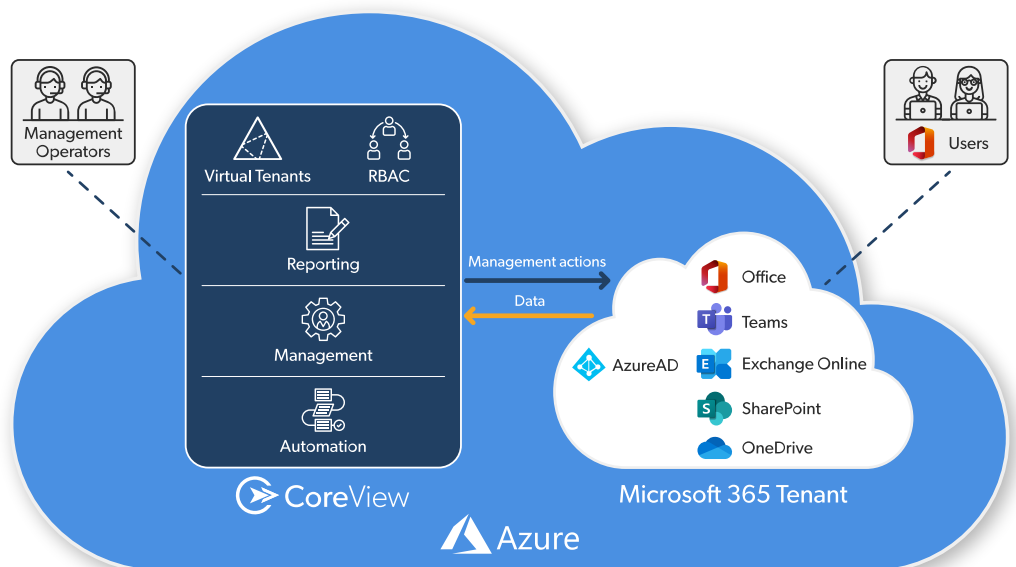

Everything you need to see, manage and automate Microsoft 365 and maximize your SaaS investments.

CoreSuite makes enterprise Microsoft 365 management simple and superb – boosting IT efficiency with superb user management, delegated administration and Virtual Tenants. Maximize M365 investment with adoption and license lifecycle management, and mitigate risk with M365-specific security protections.

The CoreSuite Microsoft 365 Management Platform

As digital transformation and SaaS adoption accelerate, organizations are looking for ways to reign in control of this new normal. Products that worked fine for on-prem infrastructure in the past won't cut it for Microsoft 365. Organizations need a new way to increase IT efficiency, realize SaaS ROI and mitigate risks in this brave new SaaS world.

CoreSuite benefits include:

CoreSuite offers one unified dashboard for all your enterprise Microsoft 365 management needs. Users seamlessly shift between tasks like calculating chargebacks and preempting data breaches to onboarding new employees and tracking long-term product adoption.

Prevent and Respond to Data Breaches with Alerts and Forensics

When enterprise data is compromised, it can take months to find out – and even longer to track down the cause. CoreSuite immediately alerts you to suspicious activity and provides long-term storage for your user activity logs.

Delegate Control Over Reporting, Admin Functions

CoreSuite radically improves administration and secures your M365 environment through RBAC, Virtual Tenants and delegated administration. We also allow global IT administrators to delegate control over all aspects of the management interface, including reports, custom PowerShell scripts and everyday admin functions.

Delegate and Oversee License Lifecycle Management

Thousands of employees means thousands of Microsoft licenses to manage. Keep things simple with a product that lets you segment your tenant, create license pools, delegate admin rights over licensing, simplify chargebacks and automate common provisioning tasks.

IMPROVE IT EFFICIENCY

Work more efficiently by doing things in seconds that used to take hours.
Hello productivity!

MAXIMIZE SAAS ROI

Get the most from your SaaS investment. Track everything, boost adoption and optimize licenses.

MITIGATE RISK

Identify and correct security and compliance risks with unparalleled visibility and automation.

More than **5.5 million** users under management | Over **10,000** operators

If you are looking for a solution that provides the most in-depth Office 365 user and subscription detail at your fingertips, CoreView is it. CoreView is a complete solution that shows you everything you would want or need to know about your Office 365 service without breaking a sweat.

– Jeff Janovich, Cloud Solutions Architect, Carlisle Construction Materials

CoreView is the global leader in Microsoft 365 management for large enterprises with customers managing more than 5.5 million M365 users worldwide. We help IT and Security teams master their Microsoft 365 deployment to increase efficiency, drive ROI, and mitigate risks. IT leaders turn to CoreView when they're ready to break through limitations set by Microsoft 365's default management interfaces and need true enterprise-grade delegated administration and cross-SaaS workflow automation to meet their goals. Our customers save time, avoid errors, and achieve levels of security and compliance not possible without our powerful tools. (PS, Admins love us too!)
