Optimizing Mobile Workflow

Enterprises invest heavily in mobility and digital transformations. Beyond the core technologies, it is critical to ensure an efficient workflow. Every enterprise and every workflow has unique nuances relative to how mobile technologies are used, handled, stored and charged. InfoCase solutions help to optimize the mobile experience.

How will the device be used within the workflow?

When the user needs their hands, where does the device go?

When the user is mobile, how is the device carried?

What other equipment will be used?

What environment is the device used in?

We design accessories to fit workflows and end user needs.

Choosing the Right Accessory

Data Entry

Hand straps and easel functionality provide ergonomic options for holding / utilizing the device for long periods of time while in the field.

Field Work

Shoulder straps, mobility kits and bundles, user harnesses, and holsters provide users hands-free device security and can often be paired with additional ergonomic accessories.

Mobile Point of Sale

Integration kits combined with user harnesses provide device security and full, hands-free access to all device functionalities.
