

Imagine a Virtual Courtroom that functions like the real thing

It can be a reality – if you select the right technology partner. Be sure to ask them the following questions before your start.

Is the solution feature-rich, offering the tools you need to function as a true Courtroom?
Does it have private lobbies where content can be displayed and the judge is free to speak to any individual or group as needed? Does it provide private sidebars for client/attorney or judge to use and include document/evidence cameras?

Does the solution support remote participants via a simple, intuitive solution that can be used anywhere, anytime on a smartphone, tablet, or other mobile device?
Mobility is a necessity. And effective mobility requires easy-to-use software that can operate on a user's existing device without the need to purchase additional expensive equipment.

Does the solution allow consecutive, simultaneous, relay, and teaming interpretation for remote interpreters ?
When a non-English speaking or LEP participant's speech is translated, it should be done efficiently without delay to speed proceedings and retain accuracy.

Can their camera controls provide active, dedicated, and locked views?
Body language, facial expressions, and other non-verbal clues can reveal more than just the words spoken. All parties benefit from the capability to lock cameras on defendants and witnesses during testimony

Can the solution isolate and vary recording of a variety of sidebar configurations?
Courts should adopt simple-to-use, real-time technology that can easily shift to private sidebar conversations and recording with a touch of a button.

Can it support multi-channel recording to produce court transcripts for each person?
Court recordings should capture individual channels for each persona so they can be easily isolated for later transcription.

Is it protected by encrypted and FedRAMP Authorized security features?
Privacy of proceedings and encrypted media are critical to protecting the integrity of our legal system. Federally approved solutions provide the highest level of data privacy.

Cisco Webex. Simple, secure, and integrated. FedRAMP Authorized.

We're here to help you transition your courtroom to virtual status with secure and simple-to-use remote video access.
