

Microsoft

3 ways you can ensure secure, productive remote work for your nonprofit

As remote work becomes increasingly common, you need to empower employees and volunteers to be productive from anywhere. At the same time, you can't compromise on security. These goals are complementary: secure work is productive work. With the right technology approach, you can protect data, devices, and applications, minimize the impact of security on your staff, and simplify IT.

Secure remote work challenges

1. Remote app access

Traditional VPN-based app access implies trust based on where you are located and can negatively affect both security and productivity.

How can you deliver seamless access while maintaining high levels of protection?

2. Device and app management

Remote workers need the ability to be productive on a wide range of devices. Yet IT needs visibility into which apps are being used and control over sensitive data.

How can you simplify management of complex device and app ecosystems?

3. Data protection

With workers accessing apps and data remotely, traditional perimeter-based security methods are not the best fit.

How can you protect your organization's resources wherever they live?

Enable remote access to apps

Eliminate the complexity of VPNbased access to provide the tools your employees and volunteers need with strong security and high performance.

Single sign-on convenience and security

Azure Active Directory (Azure AD)

Deliver highly secure, one-click access to applications, whether on-premises or in the cloud.

- One identity, thousands of apps
- No VPN required
- Works across devices

Smart security that adapts

Azure AD Conditional Access

Never trust, always verify. Conditional Access automatically applies the right level of control based on context, using information about device, location, user role, risk, and more.

Manage devices **And apps**

From traditional PCs to mobile devices connecting through the cloud, modern solutions unify security and management to simplify support for remote workers.

Unify device management

Microsoft Endpoint Manager

Bring together traditional, on premises PC management solutions with advanced, AI-powered cloud tools in one solution.

Endpoint Manager = Intune + System Center **Configuration Manager**

Protect data on any device

Ensure continuous productivity by securing organization data on both managed and personal devices.

Microsoft Intune verifies device compliance

Azure AD enforces Conditional Access policy based on device status

C

Only compliant devices can access apps and services

Protect nonprofit resources

Empower users to access missioncritical data without increasing security risk.

Discover, manage, and protect your sensitive data wherever it goes

Microsoft Information Protection

Discover and control access to your cloud apps

Microsoft Cloud App Security

- Identify which apps people are using
- Assess risk levels and compliance \checkmark
- Detect unusual behavior across cloud apps \checkmark

Protect nonprofit resources

Microsoft Defender Advanced Threat Protection + Office 365 Advanced Threat Protection

- Discover and remediate endpoint vulnerabilities and misconfigurations
- Reduce attack surface to harden your systems and to \checkmark regulate access to potentially malicious IPs, domains, and URLs
- Automate the process of investigating and \checkmark remediating threats
- Protect users against phishing and malware attacks \checkmark

Empower your people to be productive anywhere

An effective modern workplace requires highly secure, high-performance remote access to apps and data across devices and locations. Microsoft offers a comprehensive suite of tools and solutions to enable productivity anywhere.
