

# Open the doors to the hybrid workplace with Microsoft Surface

Windows 365 and Azure Virtual Desktop lead the way to a robust, manageable virtual desktop infrastructure (VDI).

It's no surprise that more than 70 percent of workers want continued flexible remote-work options after the COVID-19 pandemic.<sup>1</sup> This desire means more enterprises are seeking a long-term hybrid work solution that supports both in-office and remote workers.

Provide your employees with the best work environment no matter where they are. Microsoft virtual desktop solutions on Surface devices provide a highly flexible, simple, secure, and familiar Windows environment on any device.

## Windows 365: Optimized for simplicity

Windows 365 introduces a new personal computing category, the "Cloud PC," that draws on the power of the cloud and the capabilities of the device for a complete end-to-end service.

- **"Instant-on" experience.** Employees can start working right away, even when switching devices, in a Windows environment that's always up to date.
- **Simple management.** Streamline procurement, deployment, and management in a single console via Microsoft Endpoint Manager.
- **Simple cloud security.** Data is stored in the cloud, not the device, in a Zero Trust environment.

## Azure Virtual Desktop: Optimized for flexibility

Azure Virtual Desktop provides a VDI platform for nearly any use case, accessible from virtually anywhere.

- **Fast and efficient.** Get a virtualized Windows experience that can be set up in minutes.
- **Reduced costs.** Save operating expenses by paying only for what you use and using existing licenses for multisession Windows environments.
- **Built-in security.** Protect data with security-enabled endpoint-protection strategies, including Trusted Platform Module, Unified Extensible Firmware Interface,<sup>2</sup> Windows Defender Credential Guard, and more, when you pair with Surface.
