

Surface for Financial Services

The shifting landscape in Financial Services

Serving client needs in the hybrid working world

Support employee productivity
for hybrid work

Transform core processes to
better serve clients

Keep organization and client
data secure

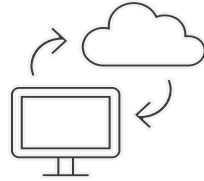

Surface is built for hybrid work

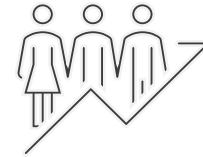

Security

Security from **chip-to-cloud**—
a zero-trust security model
that starts with Surface devices²

Deployment & Management

Zero-touch deployment and
unified management reduce costs and
complexity for a distributed workforce¹

Productivity

Flexible, premium devices for innovative
customer service processes, demanding
analysis, and easy collaboration

Sustainability

Devices designed at aiming to reduce
carbon impact and waste, and built with
integrity built in³

Microsoft Surface and Productivity

Experience the best of Microsoft on Microsoft

Powerful productivity to get it all done wherever you work

Surface devices are designed for flexible work. From running your organization's essential business apps to your enterprise-grade productivity apps such as **Windows 11** and **Microsoft 365***, Surface devices help you do it all with the latest processors, the RAM and storage you need, extended battery life,¹ and Wi-Fi and optional LTE Advanced² or 5G⁴ connectivity.

Connect with your teams to collaborate anywhere

Surface devices are designed to bring out the best of software experiences. With high-end cameras and quality microphones and speakers, you can look and sound your best on **Microsoft Teams***. Feel more confident and connected in online meetings with built-in, intelligent AI camera effects on Surface that helps keep the focus on you, such as Voice Focus and Team Background Blur. **Surface Hub 2S**, an all-in-one meeting and collaboration solution certified for Microsoft Teams, brings hybrid teams closer together with a native **Microsoft Teams Rooms*** experience.

Cloud PC on Surface

Connect workforces that are on the go or distributed smoothly and securely. **Windows 365*** and **Azure Virtual Desktop*** balance your employees' need for reliable access to workflows with other business imperatives: security, scalability, portability, business continuity, and modern management.

Industry-leading security

Microsoft security at every level

Every layer of Surface from chip to cloud is maintained by Microsoft, giving you ultimate control, proactive protection, and peace of mind wherever and however work gets done.

Designed and built with supply chain security in mind

Surface takes an end-to-end approach to security by incorporating industry standard security controls and risk management methods in the supply chain.

Surface enables powerful Windows security by default

The new set of hardware security requirements that comes with Windows 11 is designed to build a foundation that is even stronger and more resilient to attacks.

Microsoft-built UEFI

Unified Extensible Firmware Interface (UEFI)¹ is built by Microsoft and included in Surface devices. Since Microsoft owns our own UEFI, we are in a unique position to respond to security threats quickly and push firmware updates seamlessly via Windows update.

Ultimate control with remote device management

Zero-touch deployment with Windows Autopilot

Deploy faster and more securely with Windows Autopilot across the globe in Microsoft Endpoint Manager*.

Seamless device management with Microsoft Endpoint Manager

Easily manage devices in one location, roll out both firmware and software patches via Windows Update and make sure devices are always up to date—automatically even while asleep.

Help ensure highly classified data remains protected from spying, keeping your environment more secure

Surface can be managed at the firmware level, meaning capabilities like the camera can be turned off for any device in highly secure areas.

Centralized solution to monitor health and obtain helpful insights

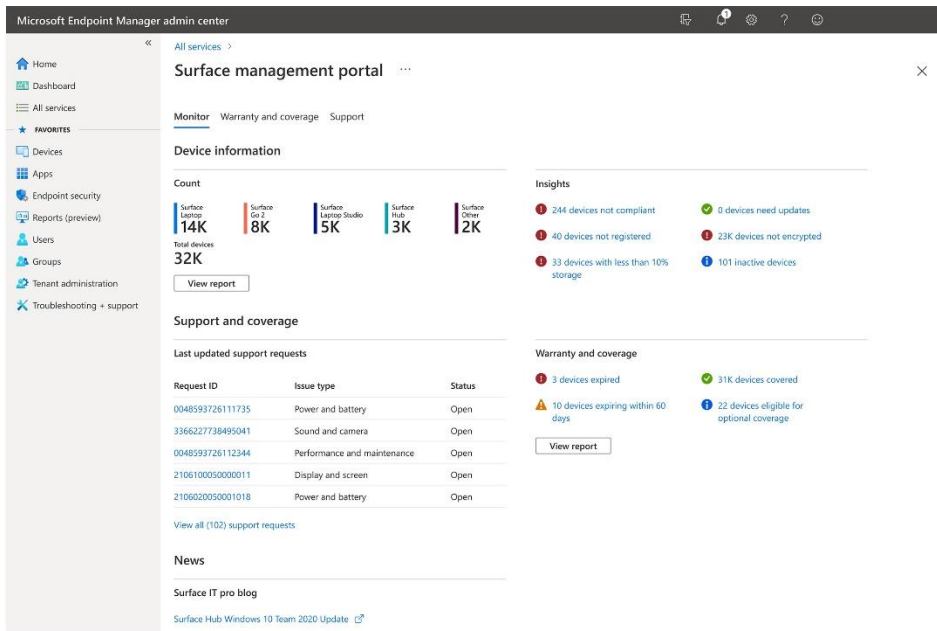

Monitor health and view helpful insights of all Surface device in one centralized view with Surface Management Portal.

Microsoft Surface Management Portal

An elevated Surface experience

Surface Management Portal* is a centralized solution for IT administrators to self-serve, manage, and monitor Surface devices at scale in Microsoft Endpoint Manager.

Reduce IT costs with insights into the health and statuses of all Surface devices.

Self-service efficiently with an easier way to manage warranties and support requests for all Surface devices.

Experience a streamlined management solution with reduced manual work in Microsoft Endpoint Manager.

Support multiple form factors by streamlining management of all Surface devices through Intune and hybrid managed devices.

Receive regular updates to Microsoft Surface Management Portal.

A product lifecycle approach to sustainability

Reducing carbon impact

Microsoft's Surface devices are integral to achieving the company's commitment to be a carbon negative company. To achieve this, we are improving efficiency in our operations, devices, software, and supply chain. We are also delivering technology to help our customers measure and manage their carbon emissions more effectively.

Designing with circularity in mind

The 'take, make, and waste' model of electronics is no longer viable. That's why at Surface, we design products with the circular economy in mind, meaning we follow a 'reduce, reuse, and recover' model. Designing for circularity minimizes waste and extends the lifespan of our devices for as long as possible.

Integrity built in

The integrity we build into our products is the reason we share them with the world. It means our design process focuses on building products of the highest quality, with a responsible supply chain that meets higher ethical and environmental standards.

Integrity also means our commitment to transparency on the impact of our products and our supply chain.
