

Surface for Government

Industry-Leading Security

Industry-leading security

Microsoft security at every level

Every layer of Surface from chip to cloud is maintained by Microsoft, giving you ultimate control, proactive protection, and peace of mind wherever and however work gets done.

Designed and built with supply chain security in mind

Surface takes an end-to-end approach to security by incorporating industry standard security controls and risk management methods in the supply chain.

Surface enables powerful Windows security by default

The new set of hardware security requirements that comes with Windows 11 is designed to build a foundation that is even stronger and more resilient to attacks.

Microsoft-built UEFI

Unified Extensible Firmware Interface (UEFI)¹ is built by Microsoft and included in Surface devices. Since Microsoft owns our own UEFI, we are in a unique position to respond to security threats quickly and push firmware updates seamlessly via Windows update.
