

Designed for work. Optimized for healthcare.

“Using Surface Pro devices, we’ve opened up opportunities to provide better healthcare, better patient access, and better ways to overcome personnel shortages than ever before.”

Darin Anderson – Executive Director for Telehealth, [Banner Health](#) 

Banner Health deployed Microsoft Surface Pro tablets to significantly expand telehealth services in hospitals and clinics. It used Surface Pro tablets to help its staff treat more patients and elevate the patient experience. Using Microsoft technology, Banner Health improved both the convenience and efficiency of healthcare while using its staff and resources more productively.

“These pediatric intensivists can see the monitor tracing, the history, and they have direct camera access to the child. It’s really an incredible thing, and Surface is critical to providing that kind of care.”

Jordan Tannenbaum – VP, CIO, and Chief Medical Information Officer, [Saint Peter’s Healthcare System](#)

“Our Surface Go devices work with touchless authentication cards to enable multi-factor verification on workstations.”

David Zažímal – Deputy Director for Informatics and Cybersecurity, [Hospital Jihlava](#)

“Microsoft Teams and Surface devices have greatly enhanced our nursing service. An example of this is a nurse’s home visit with a client: They’re able to dial in to other allied health professionals, or even our GPs, to consult on an integrated care plan.”

Chris Dury – Chief Information Officer, [ECH Australia](#)
