

Built for security, designed for trust

Cyber-resilient | A Zero Trust approach | AI-ready

A foundation of built-in protection

Held to the same standard as all Microsoft services and software, Microsoft Surface devices provide uncompromising chip-to-cloud security, put ultimate control in your hands, and provide peace of mind wherever and however your work gets done.

Security

- Get powerful Windows 11 security by default
- Stay protected with encrypted security at every layer
- Offer a front line of defense with Zero Trust built in

Management

- Simplify set up with zero-touch deployment*
- Remotely deploy updates and monitor health*
- Reduce device management time and repairs*

Peace of mind

60%

of SMBs go out of business within six months of a data breach.¹ Businesses that choose Surface choose peace of mind.

Microsoft Surface and trust

Surface AI PCs² and Copilot+ PCs bring software and hardware together—from device to cloud—to build an end-to-end AI experience that supports employees, IT needs, and your small business.

Microsoft security at every level

Industry-leading security from Windows 11 safeguards sensitive data, and remote management provides protection at every layer.

Secure-core PC protects against breaches and attacks.

Proactive protection and control with Microsoft firmware and UEFI platform.

From security to serviceability, Surface is tailored for trust to help small and medium businesses outperform.
