Healthcare - Need to ensure compliance

(Veriato)
by **Awareness**

The head of HR at a healthcare company in California was concerned that hybrid workers were not adhering to HIPPA compliance regulations. With people at home, people had gotten lax about sharing patient information over text and email, and saving documents to their computers in ways that were not secure.

The head of HR needed a solution that would be able to monitor activity across the organization to help ensure compliance based on specific HIPPA standards. He wanted to:

- Monitor workers that were working from home
- Know if people were not complying with important standards
- Have proof of non-compliance without having to access workers' machines directly.

Together with the healthcare system's CTV, the head of HR installed Veriato across the organization. Veriato helps ensure that all workers remain compliant. Managers can now:

Record activity on individual worker machines without having to access them	Customize their recording settings to not capture sensitive patient information
Get alerts if specific types data are being accessed	View activity to see if non-compliant activity is occurring
Block access to specific programs such as file sharing or chat	

With Veriato, the HR manager had "eyes and ears" across the organization even for remote and hybrid workers. When someone was not compliant, it was much easier to check and secure proof - without having to directly access a machine. The added monitoring dramatically reduced non-compliance issues.

About Veriato

Veriato is a leading provider of workforce intelligence technology, helping businesses better monitor and manage employees. With powerful analytics that work across networks, in the cloud, and on-premise, companies gain complete oversight, ensuring maximum productivity and minimum risk. Today's remote work landscape has added complexity for people and security teams, and Veriato is the partner of choice to deliver unmatched insights to help companies thrive.
