

VISUALC3

Executive Summary

How does VisualC3 work?

VisualC3 enables your organization to easily provide professional safety monitoring of your people via the VisualC3 mobile app. VisualC3 allows you to provide peace of mind to your people right on their own mobile device.

Who can be notified?

Instantly, the application notifies your organization's security team and/or key decision makers. This request includes attachments such as notes, photos, or video, to provide situational context to a potentially escalating situation.

Who provides professional monitoring?

Your internal security team can use VisualC3 to provide top-of-the-line professional monitoring. If you don't have an internal security team, our premium plan provides a professional monitoring service via RapidSOS to connect your people directly with emergency services.

How is response initiated?

Monitoring agent contacts the individual in panic mode. On-site security or local first responders are dispatched. This method circumvents any wait to connect to assistance, and enables your security to contact local emergency services from anywhere in the US.

Focus on Your Business

VisualC3 is the solution to your security concerns. We focus on streamlining security and safety for organizations so you can focus on your business.

Provide Peace of Mind

The VisualC3 solution increases personal safety and peace of mind by immediately providing location-based data to streamline response and communication.

Notify Key Stakeholders

VisualC3 is designed to provide organizations an additional tool to command, control, and communicate with key stakeholders during any situation.

Easy & Intuitive

VisualC3 is designed to be easy and intuitive to use by everyone. We strive to make our solution the easiest to use professional monitoring service in the industry.
