

Why Your Business Deserves Better Security

Small businesses are hit by 62% of all cyberattacks

The average cost of a compromise for SMBs in 2019 was \$1.24M

58% of SMBs say they do not have visibility into employees' password practices

Protect your business with the strongest security team on the planet.

Securing your network

Firewalls control access to your company's resources by monitoring incoming and outgoing network traffic. For added protection, look for a firewall that offers visibility and automation.

Protecting your employees' devices

Cisco Advanced Malware Protection (AMP) prevents threats at the point of entry and then continuously tracks every file it allows onto your endpoints, such as mobile devices, laptops, desktop PCs, and more.

Protect your passwords

Cisco Duo helps protect users and their devices against stolen credentials, phishing, and other identity-based attacks. It verifies users' identities and establishes device trust before granting access to applications.

Security for your users wherever they are

Cisco Umbrella helps protect your users both on and off the network by blocking malicious Internet destinations before a connection is ever established.

Talos: Your Ultimate Security Advantage

Talos security intelligence is the industry's most powerful cyber threat protection, which Cisco integrates into every solution. Talos tracks threats across end points, networks, cloud environments, web, and email providing a comprehensive understanding of cyber threats and solid, actionable intelligence.
