Nebula:

Affordable Meraki Alternative

Nebula provides the same benefits of cloud managed networking that Meraki has popularized at a much more digestible price without the mandatory licensing fees.

Nebula Provides:

- + Management of Security Appliances, Switches, and Access Points through a single pane of glass
- + Free cloud management for an unlimited number of devices, sites & customers
- + Zero touch deployment. Just plug-in and go
- + Multiple admin accounts with customizable access levels
- + Mobile app for site status, alerts, and installation tools
- + Lifetime warranty & US-based customer support for no extra cost
- + Easy management and monitoring of sites, customers, and client devices

Nebula provides the same great cloud-based SMB management tools and installation experience that your Meraki customers are used to.

More Nebula Benefits

In addition to the free Base tier, Nebula offers two optional licensing tiers that unlock more features; Plus and Pro. Licensing is done on a per organization basis, allowing you to have different customers on different tiers.

Optional MSP license allows you to re-brand the Nebula interface with your logo, create teams of administrators, and gives you a dedicated MSP view that let's you quickly check the status of all your customers with a single glance.

Easily transfer devices and licenses between sites and customers.

Challenges with Meraki

- Requires an active license just to manage the hardware you already have.
 - If license expires, the hardware is disabled.
- Licenses are expensive, optional Nebula Pro Pack costs a fraction of Meraki.
- Licensing is not flexible.
- Hardware costs an arm and a leg, Nebula APs start under \$100.
- Meraki APs lack ZyXel adaptive Smart Antenna technology. Independent tests show ZyXel APs have higher/better performance in real world environments.
