# It's time for simpler detection and response

Security teams face an expanding threat landscape and an environment that is rife with friction – making security efficacy elusive. Incompatible tools and siloed context makes teams toggle between consoles, trying to manually correlate attack information. This approach isn't viable and pushes dwell times up to 280 days on average[1].

To simplify detection and response, security teams need to be able to turn weak signals into reliable alerts and act on them with confidence. This confidence should be based on context gathered from every corner of their environment consolidated into a single view that is easy to explore.

SecureX offers the broadest XDR functionality available

Our XDR solution, facilitated by SecureX...

- Unifies 1st and 3rd party detection technologies
- Accelerates response action throughout the full security environment
- Deploys in any environment, regardless of vendor
- Normalizes and centralizes data efficiently
- Leverages machine learning and automation across the environment
- Facilitates proactive threat hunting and automated incident response

SecureX delivers the fastest route to XDR

Our approach to XDR starts with an evolution on two existing detection and response frameworks – EDR and NDR. By bringing these two technologies together, and providing them with telemetry and insight from the rest of your security environment, we can deliver:

You'll see instant changes with SecureX at the heart of your XDR

90% Reduction in analytics effort per incident

45% Decreased risk of a data breach

50% Decreased cost of a data breach

Unified, enriched context

Accurate, correlated detections

Faster, orchestrated responses

"If you spend your day dealing with security incidents, SecureX is life changing"

Director,
IT Services Firm

8 elements that Cisco brings to XDR that no other vendor can touch

1. We deliver the best and most comprehensive XDR capabilities across detection, investigation, and remediation.

2. Our cloud-native platform is built into all of our products, setting the foundation for an extensibleXDR approach.

3. We have invested billions in integrating 3rd-party solutions, so you don't have to.

4. We have all of the pieces you'll need for XDR, security, and more, in one place.

5. We have a superior ability to ingest telemetry from more data inputs than any other vendor.

6. We offer powerful automation to solve human-scale problems.

7. We support every layer of detection with the most actionable, comprehensive intelligence.

8. Our platform-based portfolio positions you for further security transformation.
