

Secure, scalable and unified access control

AXIS Camera Station Secure Entry

Enhance security and safety on your site with a complete access control solution that combines physical access control with video verification for easy monitoring, assistance and investigations. Secure your entrances, grant and assign access, understand who is going where and when.

- > **Ensure your system will be secure** with full end-to-end encryption from card to server and protection of data on the secure side of the door
- > **Scale your system** as your site grows and add on additional units as needed
- > **Take your physical access control solution to the next level** by integrating cameras, audio and analytics or other systems

An end-to-end access control solution with AXIS Camera Station Secure Entry

Video management software and network video recorders

- > All-in-one video and access control management
- > Monitor what is happening at entrances
- > Remotely assist with entries
- > Investigate video footage associated with door events

Network door controllers

- > Reduce labor costs with less cabling
- > Optimize PoE+ power to distribute power to door locks
- > Flexibility to install at door or in a secure area
- > Increased cybersecurity with encrypted connection via HTTPS
- > Open platform with support for Wiegand or Open Supervised Device Protocol (OSDP) readers
- > Utilize I/Os to integrate with other systems and devices

Readers and intercoms

- > Contactless credential reader with or without keypad and smart card
- > Intercoms with high-quality video and audio with 2-way communication
- > Secure communication via Open Supervised Device Protocol (OSDP)
- > Simple installation with IP intercom and card reader

Credentials

- > Flexible credential access with cards, fobs, PIN, mobile QR code or license plate
- > Contactless MIFARE DESFire EV2 smart cards and key fobs
- > Mobile QR codes supported via AXIS Barcode Reader ACAP

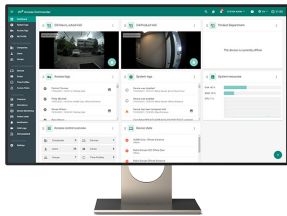

Simple, flexible and mobile access control

2N IP Access Control Systems

Secure every room reliably with an IP access control proximity reader. These industry-leading, sophisticated solutions are suitable for multi-unit residential complexes, commercial buildings or campuses. You can use them for everything from basic identification and door entry control to advanced access management.

- > **Speed up installation time** with the controller and reader all-in-one unit, you only need one device for one door
- > **Combine technologies** with Bluetooth, RFID, PIN and fingerprint access control by combining them all in a single reader or intercom
- > **Offer your customers the future of IP access control technology** using modern mobile access with WaveKey technology for FREE

Access control solutions using 2N® Access Commander software or 2N OS

Access control software or web interface

- > Full featured access control software for bulk management, monitoring and advanced capabilities
- > Tailored to systems with dozens of readers and intercoms
- > Manage very small installations up to 2 or 3 readers with basic features using the built-in web interface

IP access control units

- > Reduce labor with less cabling
- > Install a single network cable for connection and power using PoE
- > Combines the functions of a traditional controller and edge devices in one unit
- > Supports a variety of credentials, including fingerprint, RFID and/or Bluetooth readers and keypad or touch display
- > Flexibility with open protocols for integration with 3rd party systems

IP and LTE intercoms

- > Audio-only or HD audio and video for secure communication
- > Award winning designs and highly ruggedized emergency call box models
- > The first cellular intercom, LTE Verso, requiring only a power source and SIM card
- > Options include fingerprint, RFID and/or Bluetooth readers and keypad or touch display

Credentials

- > Bluetooth credentials using WaveKey technology and My2N app
- > Flexible credential access with cards, fobs, PIN, fingerprint, QR code, or license plate
- > Contactless MIFARE smart cards and key fobs
- > PCard add-on software for encryption of MIFARE DESFire EV3 smart cards for more security
