Secure Function Lock / Setting Lock

brother
at your side

Secure Function Lock is a built-in solution that offers control over who has access to a machine and what functions they are allowed to use. Page limits and printing restrictions help manage costs and allow setting permissions for users to print in color.

Administrators can rely on Secure Function Lock to restrict public access to specific functions and to define what features can be accessed by user or group. Additionally, this solution works with the optional Secure Print+ and Secure Print Advanced features to hold print jobs at the machine for secure job release.

Setting Lock provides an administrator with the option to set a password to block unauthorized access to machine settings to help prevent confidential information from falling into the wrong hands.

Secure Function Lock

For environments seeking secure workflows with easy card authentication and cost control.

- Built-in Solutions
- Scan Solutions
- Tracking and Reporting

Setting Lock

For environments with security requirements that require restrictions on who can change machine settings.

- Built-in Solutions

Activity Reports

Receive activity reports based on users or groups when job logging feature is enabled.

Cost Effective

Avoid the expense of management software, servers, and external card readers.

Authorize Access

Configure passwords for selected users to grant access to functions or to set page limits.

Restricted Functions

User List settings need to be configured after "Restricted Functions". "Restricted Functions" enables you to manage the restrictions per user or group. To restrict a function, uncheck the corresponding box.
