

Azure VMware Solution lets you take your existing skills to the cloud

Move VMware workloads from your datacenter to Azure VMware Solution and integrate additional Azure services with ease

Azure VMware Solution (AVS) is the simplest and fastest way to accelerate your cloud journey—and you can continue managing your IT environment with the same VMware tools you already know.

A seamless migration on your terms

As a Microsoft partner, we see how easy AVS makes it for our customers to move to the cloud on their terms. With an “as is” migration, you’re running the same workloads—and using the same skills, tools, and processes. The only difference is that it’s in Azure, not on-premises. Plus, we can help you identify what workloads to migrate and when.

Microsoft-managed and built on VMware technology

Are you ready to run your VMware platform and workloads in the cloud without re-architecting applications or reskilling your people? Let us show you how to gain the continuity, scale, and fast provisioning for your VMware workloads on the global Azure infrastructure.

A great path for application modernization

AVS is a great way to get started working in the cloud. Once there, you'll benefit from better performance, better security, and access to AI and 200+ other cloud native services to build new and innovative experiences.
