

Dropbox vs OneDrive: Teams who create choose Dropbox

For basic cloud storage and file sharing, OneDrive features can be enough for some users. But when it comes to creating content, especially with a team, Dropbox is simply more versatile. Plus, Dropbox makes it easy to work with hundreds of file types—even the rich media and large files that OneDrive doesn't support.

1 Why OneDrive customers love Dropbox

Many organizations need more than Microsoft to do their best work. With Dropbox, teams can collaborate on terabytes of audio and video, preview large Adobe design files, and collect feedback from clients and vendors with frame-accurate commenting. The best part? You can do all this while seamlessly working with the Microsoft 365 apps you use every day.

2 Which industries benefit most from Dropbox?

- Media and design
- Public relations and marketing
- Sales organizations and consulting firms
- Researchers and academics
- Architects and construction companies

3 Dropbox + Microsoft: Better together

With expansive integration capabilities, Dropbox can power collaboration within Microsoft 365 and streamline other Microsoft-based workflows.

For end users:

- Deep Windows Explorer integration
- Desktop Office integration with the Dropbox badge
- Office Online integration with co-authoring
- Office Mobile integration
- Dropbox Add-on for Outlook
- Integration with Microsoft Teams

For IT:

- Active Directory Integration (sync users and groups)
- Azure AD Integration (sync users and groups)
- ADFS integration (on-premises or Azure) for Single Sign-On
- Microsoft Power Automate
- Microsoft Cloud App Security
- With the Dropbox admin console, IT admins have all the visibility and data management Dropbox can offer

4 Dropbox vs OneDrive—let's take a closer look

Dropbox offers end-to-end support for rich content workflows, from draft to delivery, integrated with the apps customers need.

	Dropbox	OneDrive
Storage and sync
