

Get data security designed for today's dynamic work environment

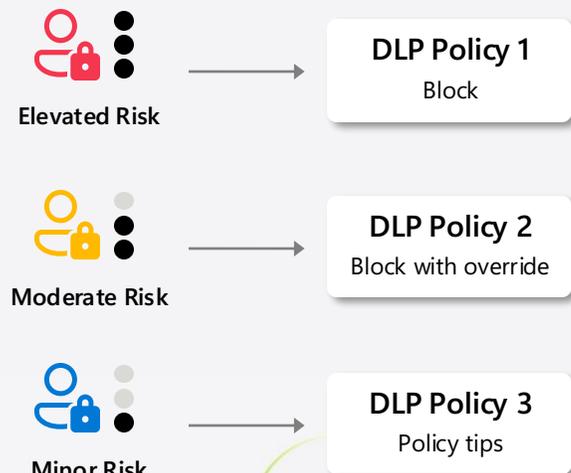

Data security presents one of the largest threats to enterprises today. With the amount of data breaches outpacing the ability of cybersecurity professionals to keep pace, that danger grows more and more real everyday.

Microsoft Purview Adaptive Protection

Microsoft Purview Adaptive Protection offers AI-powered security that helps you comprehend user context and risks associated with sensitive data. It also automatically customizes the appropriate Data Loss Prevention (DLP) controls.

Microsoft Purview provides a unified platform for multiple layers of protection:

-  **Security Copilot**, the first generative AI-powered security product
-  **Context-aware detection** identifies the most critical risks with built-in machine learning
-  **Dynamic controls** on high-risk users without impacting the productivity of others
-  **Automated mitigation** minimizes the impact of potential data security incidents

80%
Incident reduction¹

93%
Improvement in quality of work by surveyed organizations using Copilot for Security²

As a Microsoft Partner we offer:

Comprehensive data security solutions across your environment—identities, endpoints, data, email, cloud apps, and infrastructure. Our managed services give your IT and security teams time back to focus on urgent needs and business growth.
