

Built for the future

Elevate how your team works in any environment with more powerful and secure systems. With everything from commercial to enterprise essentials, AMD-powered HP devices will help your business evolve for the future of work.

Productivity

HP's efficient systems and hardware paired with AMD Ryzen™ PRO processors offer an ultra-responsive user experience. Devices use less power to increase performance and battery life for up to 14.75 hours.

Do more at once: PCs can handle multiple workloads and collaboration tools while your device stays quiet and cool to the touch.

Built-in security

Provide extra protection from internal and physical threats wherever people work with multilayer security and endpoint protection from HP Wolf Security¹ paired with AMD Ryzen™ PRO processors.

In addition, protect devices in or outside your organization's network with zero-trust security through AMD's Secure Processor (ASP), HP Sure Start, and more.

Collaboration

Cloud-based remote manageability gives your IT team uniform tools to manage systems across your organization more efficiently. Wireless manageability lets you easily manage systems across different devices.

Solve collaboration challenges with immersive tools like AI-based Noise Cancellation technology that blocks out distractions so voices come in loud and clear. Enjoy high-resolution streaming to see clearly and share seamlessly.

Reliability

HP Commercial PCs undergo 120,000+ hours of testing and pass MIL-STD 810H tests, 2 which assess durability and resilience in challenging environments. These tests include everything from drops, shocks, and vibrations to exposure to extreme temperatures, humidity, and dust.

Global services and support

Our vast network of people, products, programs, and processes helps businesses operate smoothly with enterprise-level, global support. HP's highly skilled and dedicated account team is happy to offer comprehensive insight and resources to meet your needs.

Partners in innovation

HP and AMD work together to produce more energy-efficient PCs to help reduce electricity use and GHG emissions. PCs are made with recycled aluminum and have a magnesium chassis that's more sustainable than the competition's carbon-fiber chassis. Together, we commit to improving sustainability in how we design and deliver our products and solutions today and in the future.
