CHECK POINT

Check Point Email Security

Prevention First Protection for the AI Era

Stop Threats Before They Reach the Inbox

Modern attacks move faster than users. AI-powered phishing, business email compromise (BEC), account takeover (ATO), QR attacks, and AI-assisted social engineering now bypass traditional detection models and exploit the gap between delivery and remediation.

Check Point Email Security is built differently.

Our prevention-first architecture blocks threats before they reach the inbox while leveraging ThreatCloud AI to deliver highly accurate protection with minimal operational overhead.

As organizations adopt Microsoft 365 Copilot and other AI assistants, preventing malicious content before AI systems process it becomes increasingly critical.

Prevention-First Security

Prevent phishing, malware, BEC, impersonation, QR code attacks, malicious URLs, and zero-day threats before inbox delivery.

AI-Native Protection

ThreatCloud AI combines over 50 AI engines and 60 AI agents with global telemetry across email, endpoints, SaaS, browsers, and networks to identify sophisticated attacks with high precision.

Full Workspace Protection

Extend security across the modern workspace including SaaS applications, browsers, endpoints, collaboration tools, and user identities.

Agentic Email SOC

Reduce SOC workload through agentic automation, unified workflows, integrated quarantine, and streamlined administration.

Gartner® Email Security Leader 2025

#1 in critical capabilities 2025

Highest score 3.9 Core Email Protection

Highest Catch Rate

Prevention First

Stop Threats Before They Reach the Inbox

Features

- ✓ Inline pre-delivery protection for incoming, outgoing and internal emails
- ✓ Prevention of email-based attacks on AI
- ✓ AI-powered Anti-phishing and BEC prevention
- ✓ Anti-Impersonation protection
- ✓ Attachment sandboxing and CDR
- ✓ Password-protected attachment inspection
- ✓ Email Archiving
- ✓ URL sandboxing
- ✓ Sandboxing files behind links
- ✓ QR code protection, including re-writing
- ✓ Link re-writing in email body and attachments
- ✓ Zero-day prevention
- ✓ Spam and Graymail filtering
- ✓ DMARC, SPF and DKIM Management
- ✓ Security Awareness Training (SAT)

AI-Native Email Security Solution

Sees more. Stops more.

Features

- Behavioral, intent, and context-aware detection
- Detection based on ThreatCloud AI with 50+ AI engines
- Global threat telemetry across email, endpoints, cloud, browser, SaaS and networks
- Dedicated AI agent for detection of compromised accounts
- Agentic detection of Microsoft false positives and restoring them from quarantine
- Zero-click AI Agents prompt injection protection
- Agentic handling of end user phishing reports
- AI Data Set of Billions of threat signals analyzed daily
- AI agent workflow protection
- Dedicated AI agent decider for previously-inconclusive detections
- Find threats, browse through emails and build dashboards using LLM prompts
- AI-generated phishing simulations for Security Awareness Training

Complete Email & Workspace Protection

Features

- ✓ Browser-based threat protection
- ✓ Endpoint security
- ✓ Mobile threat defense (iOS & Android)
- ✓ Web & URL filtering
- ✓ Secure remote access
- ✓ Account takeover protection
- ✓ Credential phishing prevention
- ✓ Suspicious login detection
- ✓ Identity-aware threat prevention

Autonomous Security Operations

Features

- ✓ AI Agents for email SOC operations
- ✓ Unified quarantine
- ✓ Automated forensics & investigation
- ✓ SOC workflow reduction
- ✓ Reporting & forensics
- ✓ Seamless Microsoft 365 integration (API- based)
- ✓ Reduces false positives and false negatives
- ✓ Dashboards & reporting
- ✓ SIEM / SOAR integrations API
- ✓ Consolidated management
