

# Simplify compute management from edge to cloud

Enable digital transformation by modernizing server management across your entire environment, with an as-a-service experience.

## Modernize your compute management with an as-a-service experience

Discover a seamless as-a-service compute lifecycle management experience. HPE GreenLake for Compute Ops Management securely streamlines operations from edge to cloud, simplifies provisioning, and automates key lifecycle tasks. Reimagine your compute management.

**Compute powers business today, and every business is facing tough challenges—to digitally transform, address security risks, and operate efficiently. Complex server management is a distraction from these challenges, consuming IT resources and slowing innovation. With HPE GreenLake for Compute Ops Management, you can manage your entire environment with one secure and simplified experience.**

### Enabling transformation by eliminating complexity

Today's organizations need compute resources to be available in more environments than ever before. Environments that once lived in data centers are now located at the edge, close to where data is generated and consumed, and in the cloud where they can provide greater agility. Some are transforming compute into consumption-based services that can deliver a cloud experience everywhere.

However, compute management tools are often disjointed and complex, creating obstacles to transformation:

- **Rolling out distributed environments is slow and complex.**  
Deployment relies on manual processes that are time-consuming and error-prone.

- **Innovation is limited.**

Use of AI is limited to analysis, not for problem-solving that saves time and money.

- **Teams spend more time on routine tasks than strategic work.**

Skilled staff are stuck fixing problems and manually updating servers, instead of leading transformation initiatives.

Compute Ops Management solves these challenges by simplifying and unifying operations across the server lifecycle, for the whole environment, no matter where your compute infrastructure lives. Available through the HPE GreenLake edge-to-cloud platform, Compute Ops Management provides a consistent, secure cloud experience that scales elastically and is always up to date.

### The next evolution of server lifecycle management

With HPE GreenLake for Compute Ops Management, you benefit from:

- **Secure cloud operations**  
Securely bring cloud agility to distributed compute infrastructure.
- **Unified server management**  
One console to manage your entire environment, wherever it lives.
- **Simplicity and automation**  
Agile lifecycle management saves you time and money.
- **An as-a-service experience**  
Scale flexibly and instantly access the latest features.

## Secure, automated, and unified

HPE GreenLake for Compute Ops Management transforms your entire environment across three pillars: security, simplicity, and unity. You can use it to remotely manage server estates, or create new managed services for your customers and lines of business.

### Secure cloud operations

Bring enterprise security and consistent, compliant processes to your distributed compute infrastructure.

- **Protect cloud data** in transit and at rest with encryption and multi-tenant data isolation.
- **Take a zero-trust approach** with 5-factor authentication, security certificates, and the world's most secure industry-standard server, HPE ProLiant.
- **Easily establish governance and compliance controls** across the entire environment.

### Simplify and automate

Save time and money with agile management of the entire server lifecycle.

- **Drive better efficiencies** of server deployments and updates with a low-touch experience.
- **Establish firmware baseline and compliance policies** with device groupings, reducing hands-on management time.

- **Scale instantly and massively** from edge to cloud.

### Unify compute management

Use one console to manage your servers, wherever they live.

- **Manage your global environment in real-time** with access to up to tens of thousands of servers.
- **Quickly identify issues** with status data, reports, and insights.
- **Speed time to action** with bulk actions that update your server groups in a few clicks.

## Delivered as a service for an agile experience

As a part of HPE GreenLake, Compute Ops Management provides a consistent and managed experience from edge to cloud. You can:

- **Use one set of tools and processes** across your environment.
- **Stop managing your management tools** and instantly access new services, features, and fixes.
- **Innovate rapidly** with financial flexibility and speed to market.
